SUMMARY

I am an electrical engineer specializing in photonics, specifically with fiber optics and electro-optics. However, I also have a range of engineering experience spanning high-power electronics, mixed-signal circuit and PCB design, mechanical design, coding and working in a lab environment.

EDUCATION HISTORY

University of California, San Diego (UCSD) Master of Science: Electrical Engineering (Photonics)	Sep 2025 - Dec 2026
University of California, San Diego (UCSD) Bachelor of Science: Electrical Engineering (Photonics)	Sep 2020 - Jun 2023

EXPERIENCE

University of California, San Diego (UCSD) Graduate Student Researcher - Researching novel methods of modulating the optical emission of plasmonic nano-antennas. - Research includes: FDTD simulations, 2D heterostructures and electron tunneling.	Sep 2025 - Jun 2026
Vector Atomic - Pleasanton, CA R&D Engineer - Developed piezoelectric laser wavelength tuning drivers used for atomic clock frequency locking. - Designed prototype interface circuits used for laser pumps, liquid lenses, and photodiodes. - Designed acoustic and mechanical isolation for laser frequency noise improvements. - Assembled and tested CW laser systems and electrical designs in a lab environment.	Aug 2023 - Aug 2025
Ametek Programmable Power - San Diego, CA Electrical Engineering Intern - Developed analog sensors, control circuitry and PCBs for power supplies up to 45kW. - Modified and designed sheet metal chassis, CNC machined bus bars, and high-power magnetics. - Tested high-power electrical components for production and R&D projects.	Aug 2020 - Aug 2023
Intelligence Support Battalion, USMC Reserves - San Diego, CA Small Arms Technician/Armory Chief, Sergeant (E-5) Held accountable for the custody and maintenance of small arms and equipment worth \$500k+.	Jun 2015 - Mar 2022
